

Problem set submissions

Advanced Macroeconomic Theory

Hannah Römer, UiO

H 2026

Working through problem sets

Working through the problem sets carefully is where you will learn the most:

- ▶ writing down assumptions and definitions properly (e.g. for equilibria)
- ▶ finding out where you have not quite followed the lecture
- ▶ practicing your modeling skills
- ▶ seeing some applications
- ▶ collecting ideas for your own research

You are **encouraged** to work with your peers (just write up your own solutions).

Working through problem sets

Working through the problem sets carefully is where you will learn the most:

- ▶ writing down assumptions and definitions properly (e.g. for equilibria)
- ▶ finding out where you have not quite followed the lecture
- ▶ practicing your modeling skills
- ▶ seeing some applications
- ▶ collecting ideas for your own research

You are **encouraged** to work with your peers (just write up your own solutions).

I expect (and plan for) each exercise sheet to take you the better part of a full day.

Problem sets are posted on Monday and discussed on Thursday of the following week.

Submitting your work

As a rule, hand in your work by 2pm on the day before the seminar.

- ▶ send it to me as an email attachment
- ▶ submit **one PDF document**, named `lastname_AMT_PSn.pdf`, e.g. `Roemer_AMT_PS3.pdf`
- ▶ you do not need to hand in everything, but aim for **at least** a serious attempt at half of the questions also to help me get an idea how everyone is keeping up
- ▶ submissions are not graded

A few points of etiquette (which will also make you a better economist)

- ▶ Please do not hand in anything written by an LLM. If you have not written it yourself, I would much rather receive nothing at all.
- ▶ Take the time to write your solutions up cleanly, don't send me your working notes.
